Luminaires – Part 1: General requirements and tests

Luminaires – Part 2-1: Particular requirements –  
Fixed general purpose luminaires

Ausgabedatum / Date of issue:

2015

1989

### Zusätzliche Angaben / Additional information:

The above mentioned luminaires are developed, manufactured and tested in accordance with the applicable rules, the state of the art, and in accordance with the standards mentioned above.

The food industry specifies the particular requirements for areas with potential product contamination (based on a risk analysis), such as raw material handling, processing, packaging and storage, by their performance logs (standard for assessing the quality and safety of food) in accordance with the international design Standard (IFS). Thus, lighting equipment shall be protected by appropriate measures to minimize the risk of breakage wherever it poses a risk for the food products.

The above mentioned Siteco LED luminaires meet these requirements of the IFS standard by offering impact resistant cover according to EN 60598-1 section 4.13 and good cleanability. The cleaning of the luminaires must solely be undertaken with pH neutral cleaners.

Provided that - according to the requirements of IFS - proper installation and appropriate use is ensured, there is no risk of breakage of the luminaires and contamination of food caused by parts of fixed lighting equipment.
